Experience

Graduated in October 2015, involved well before

The Things Network   Dec. 2015 - Mar. 2016
Backend Developer

The Things Network is a distributed open network for the Internet of Things (IoT), entirely open-source. I am busily making contributions to both the development of the network core architecture in Go and its specifications.

The Smiths   Apr. 2015 - Mar. 2016
Full-Stack Developer

Cross-platform mobile application development using cutting-edge JavaScript open-source technologies. I evolved in a small team led by agile methods and a growing motivation towards new challenges.

Atos   Jun. 2014 - Sep. 2014
Tools Developer

Three months of internship within a three-year project as a team worker. Actively participated on test's and development's steps of a distributed and multithreaded Java / Python application.

Moovup   2014
Backend Developer

Development of a web markteting Ruby application for a small start-up. The platform provides to shopkeepers an easy solution to bring customers from web to local stores.
